London Patent Operation
General Electric International, Inc.
15 John Adam Street
London WC2N 6LU (GB)(54) **Module plug for an electronic trip unit**

(57) An electronic trip unit (22) for a circuit breaker (20) includes: a microprocessor (110) programmed to determine an overcurrent condition of the circuit breaker (20); a nonvolatile memory (115) in electronic communication with the microprocessor (110); and a module plug (60) releasably engaged with the microprocessor (110). The module plug (60) includes an identification register (118) which includes an identification number. The microprocessor (110) accesses one of a plurality of programs (120) in the nonvolatile memory (115) based on the identification number, and one of a plurality of programs (120) instructs the microprocessor (110) to perform steps necessary to operate one or more functions of the module plug (60).
